Professional Summary

Senior Software Engineer with 18+ years of experience building customer-facing products, healthcare platforms, and marketplaces. Combines end-to-end product ownership with strong frontend architecture, backend development, data modeling, and AI integration skills. Experienced in taking products from concept to production, modernizing platforms serving large user bases, and building shared systems that improve engineering efficiency. Track record includes a patient platform serving approximately 60,000 monthly active patients, AI-assisted healthcare workflows, and a marketplace that attracted 10,000 registered users.

Technical Skills

- **Languages:** TypeScript, JavaScript, Python, SQL
- **Frontend:** React, Next.js, TanStack Query, TanStack Router, Tailwind CSS, Storybook, Vite, React Native
- **Backend:** Node.js, NestJS, Express.js, Django, REST APIs, GraphQL
- **Data:** PostgreSQL, Redis, MS SQL Server, MySQL
- **AI:** OpenAI API, Anthropic Claude API, AI-powered workflow integration
- **Infrastructure & Quality:** AWS, Docker, Supabase, Playwright, Testing Library, Sentry, Datadog, GitHub Actions

Professional Experience

Solace Health | Oct 2024 - Present · *2 yrs*

Remote, San Francisco Bay Area

Staff Full-Stack Engineer | Oct 2025 - Present

- Built the Patient Experience platform from the ground up, owning full-stack implementation across React, TanStack Query/Router, NestJS, and PostgreSQL.
- Delivered patient-facing dashboards, account management, and advocate progress tracking for a platform serving approximately 60,000 monthly active patients.
- Established core platform capabilities, including authentication and authorization, feature flags, error monitoring, and automated unit and end-to-end testing.

Senior Full-Stack Engineer | Oct 2024 - Oct 2025

- Built AI-powered care-planning features using Anthropic Claude, helping advocates define patient goals, plan care, and identify next steps within their existing workflows.
- Implemented AI-assisted documentation quality checks to help advocates meet insurance documentation requirements, supporting improved claim acceptance.
- Initiated and led the UI library and design system from concept to adoption: developed a proof of concept, secured product and design buy-in, and drove implementation of shared components across four applications—Solace Health (advocates and physicians), Solace Admin, Solace Funnel, and Solace Patient.
- Modernized frontend delivery by replacing a single approximately 10 MB JavaScript chunk with a code-split application whose largest chunk is approximately 200 KB, substantially reducing the size of the largest individual chunk.
- Integrated Twilio to enable patient–advocate communication through phone and text messaging.
- Migrated multiple frontend applications to Vite to modernize the development workflow.

Zumper | Jul 2019 - Oct 2024 · *5 yrs 3 mos*

San Francisco Bay Area

Staff Frontend Engineer | Oct 2023 - Oct 2024 | Hybrid

- Led frontend modernization across Zumper and PadMapper, achieving 90% TypeScript coverage through a comprehensive JavaScript-to-TypeScript migration.
- Architected a shared design system and UI component library across frontend applications, standardizing component structure and visual consistency while making accessibility practices easier to implement.
- Implemented end-to-end tests covering 100% of critical user journeys across both platforms.
- Improved accessibility compliance to over 95% on the Zumper platform.
- Optimized Core Web Vitals, achieving perfect Cumulative Layout Shift scores and green Largest Contentful Paint metrics.

Senior Frontend Engineer | Oct 2021 - Oct 2023 | Hybrid

- Developed custom polygon-based map search, allowing users to define their own geographic search areas.
- Built a client-facing analytics dashboard that helped property managers understand listing performance and market trends.
- Improved frontend performance and search-engine optimization across PadMapper, contributing to increased traffic.
- Modernized the styling system to improve maintainability and developer experience.

Frontend Engineer | Jul 2019 - Oct 2021 | On-site

- Rebuilt PadMapper.com using React, Redux, and server-side rendering, modernizing a legacy real estate search platform serving millions of users.
- Developed property-management dashboards for listing performance and inventory management.

CareLinx | Jul 2015 - May 2019 · *3 yrs 10 mos*

On-site, San Bruno, CA

Software Engineer

- Led complete website modernization to achieve 100% mobile responsiveness and iOS/Android webview compatibility.
- Built end-to-end healthcare workflows connecting caregivers and clients, including matching, messaging, scheduling, and workflow management.
- Built real-time messaging between families and caregivers with push notifications and email alerts.
- Implemented invoice system with automated overtime calculations, PDF generation, and email notifications.
- Created background check integration with Backgrounds Online, streamlining caregiver verification process.
- Reduced JavaScript bundle size by 50%, addressing frontend performance issues and improving application loading.
- Mentored engineers on technical best practices and code quality standards.

LawLogix Group, Inc. | Apr 2012 - Jul 2015 · *3 yrs 3 mos*

On-site, Phoenix, AZ

Software Engineer

- Migrated a legacy application to a modern Python/Django architecture, improving maintainability and performance.

- Developed immigration case management dashboard streamlining legal workflow processes.
- Implemented test-driven development practices for both frontend and backend applications.
- Provided technical mentoring to new team members on development best practices.

Early Career Experience | 2007 - 2012

Chile-based Companies: Derco, AreaWeb, Quintec, TIDE S.A.

- Built e-commerce platforms for automotive industry with SAP integration.
- Developed government healthcare systems for public hospitals including birth control tracking.
- Created educational software and reporting systems for schools and colleges.
- Gained expertise in diverse technologies including ASP.NET, Django, PHP, jQuery, PostgreSQL, and Adobe Flex.

Side Projects

StickMonkey

- Built a marketplace connecting student pilots with aircraft owners and managers for flight time-building opportunities.
- Reached 10,000 registered users before discontinuing the project due to funding constraints.
- Developed the application using SvelteKit, Tailwind CSS, Shadcn, and Supabase.

Workout Timer

As a personal project, developed a timer for workouts using React Native and Expo.

https://github.com/hugotox/TabataTimer

Phaser Tetris

Recreated the classic Tetris game using Phaser and custom pixel-art sprites.

https://github.com/hugotox/phaser-tetris

Education

B.S. Industrial Engineering (Computer Science Track) | Universidad de La Frontera | Temuco, Chile | 2008

- 5-year professional degree, including algorithms, data structures, distributed systems, databases, software engineering.

Certifications

- Triplebyte certified Generalist Software Engineer.

Additional Information

- **Languages:** Spanish, English
- **Interests:** Technology, open-source projects, retro gaming, rock climbing, and fitness.
